

The Hua Lizard

By Bella
Tinsider age 11

The Hua can also grow to about 26cm length

actual size

The lifespan of the Hua is approximately 13 to 14 years

its pattern sometimes gets mistaken for the gentle and safe carabien cream lizard.

hidden power is....

squirting toxins from its finger tips!

This Lizard.... uses its tail to wrap round prey then it uses its tail to feed itself!

Beware!

These animals may not look it but they are highly venomous if you come in close contact with this animal please call 000710083 that is the pickup line for TINY YET MIGHTY (the lizard control and control)
